Customer journeys

REES46 events, September 2020 to February 2021. Recorded purchases are events, not verified orders.

Retained Events	Observed Users	Observed Products	Observed Sessions
884K	407K	53K	505K

Recorded event volume by date

Measurement and data quality

Each rate uses its stated population and observation window. Missing brand and category values are retained.

Rate definitions

Metric	Definition	Unit	Rate
F01	Within-session product view-to-cart progression	user-session-product	7.67%
F02	Within-session ordered product purchase progression	user-session-product	3.67%
F03	Purchase after cart among view-entered product groups	user-session-product	47.86%
P01	7-day observed view-to-cart progression	user-product pair	7.98%
P02	7-day ordered view-cart-purchase progression	user-product pair	3.99%
P03	7-day observed cart-to-purchase progression	user-product pair	49.96%
S01	30-minute session purchase share	reconstructed user-session	4.86%
U01	Observed-user purchase share	observed user	5.23%

Data quality checks

Check	Affected rows	Base rows	Share
Exact duplicate extra raw rows	655	885,129	0.07%
Missing brand in retained events	212,232	884,474	24.00%
Missing category in retained events	236,047	884,474	26.69%
Missing supplied session in retained events	162	884,474	0.02%

Purchase journeys by category

Same user, closed 30-minute session and product. Category differences are observational.

Groups	Reached cart	Ordered purchases	Purchase rate
645K	49K	24K	3.67%

construction › tools › drill	6,717	139	2.07%

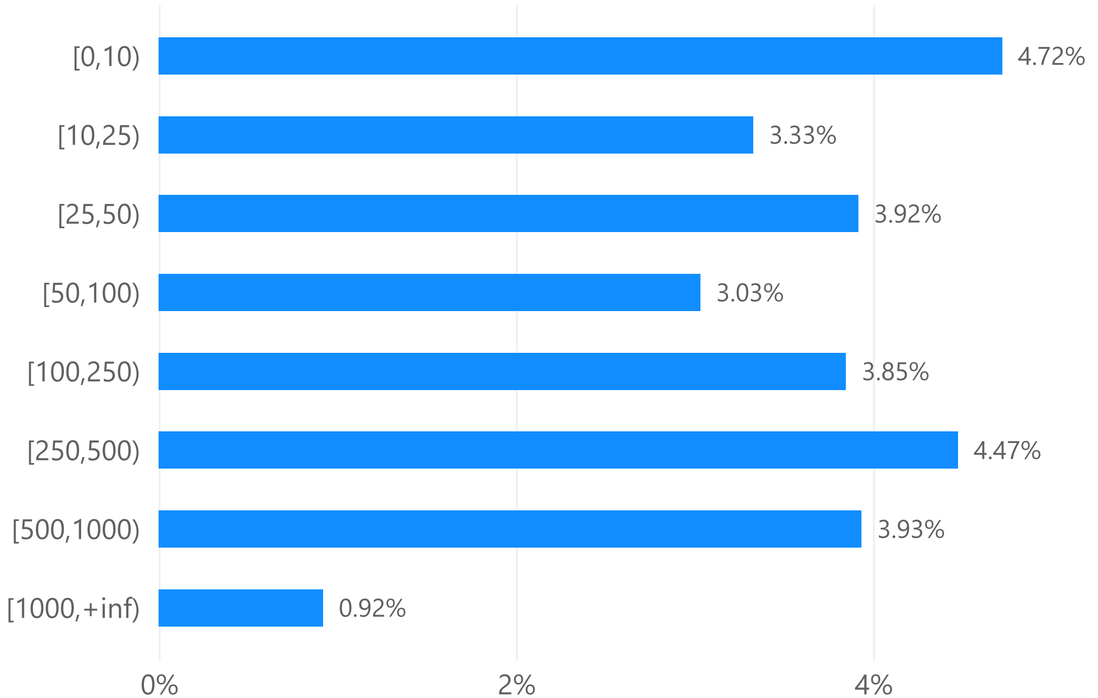

Top 15 of 108 categories by groups. All 108 remain in the full result tables.

Purchase journeys by price

First-view price in source-reported units; currency is unspecified. Price differences are observational.

Groups	Reached cart	Ordered purchases	Purchase rate
645K	49K	24K	3.67%

Purchase rate by price band

Groups and ordered purchases

Price band	Groups	Ordered purchases	Purchase rate
[0,10)	19,694	930	4.72%
[10,25)	140,471	4,676	3.33%
[25,50)	115,609	4,528	3.92%
[50,100)	127,540	3,868	3.03%
[100,250)	128,326	4,938	3.85%
[250,500)	83,230	3,724	4.47%
[500,1000)	24,347	958	3.93%
[1000,+inf)	5,443	50	0.92%

The historical email experiment

Hillstrom, 2008. Random assignment to three groups; purchase and visit rates use every assigned customer.

All assigned customers

Email group	Assigned customers	Purchase rate	Visit rate	Mean spend ($)
No E-Mail	21,306	0.57%	10.62%	$0.65
Mens E-Mail	21,307	1.25%	18.28%	$1.42
Womens E-Mail	21,387	0.88%	15.14%	$1.08

Email effects against no email

Purchase lift is in percentage points; spend is dollars per assigned customer. Intervals are marginal 95% intervals.

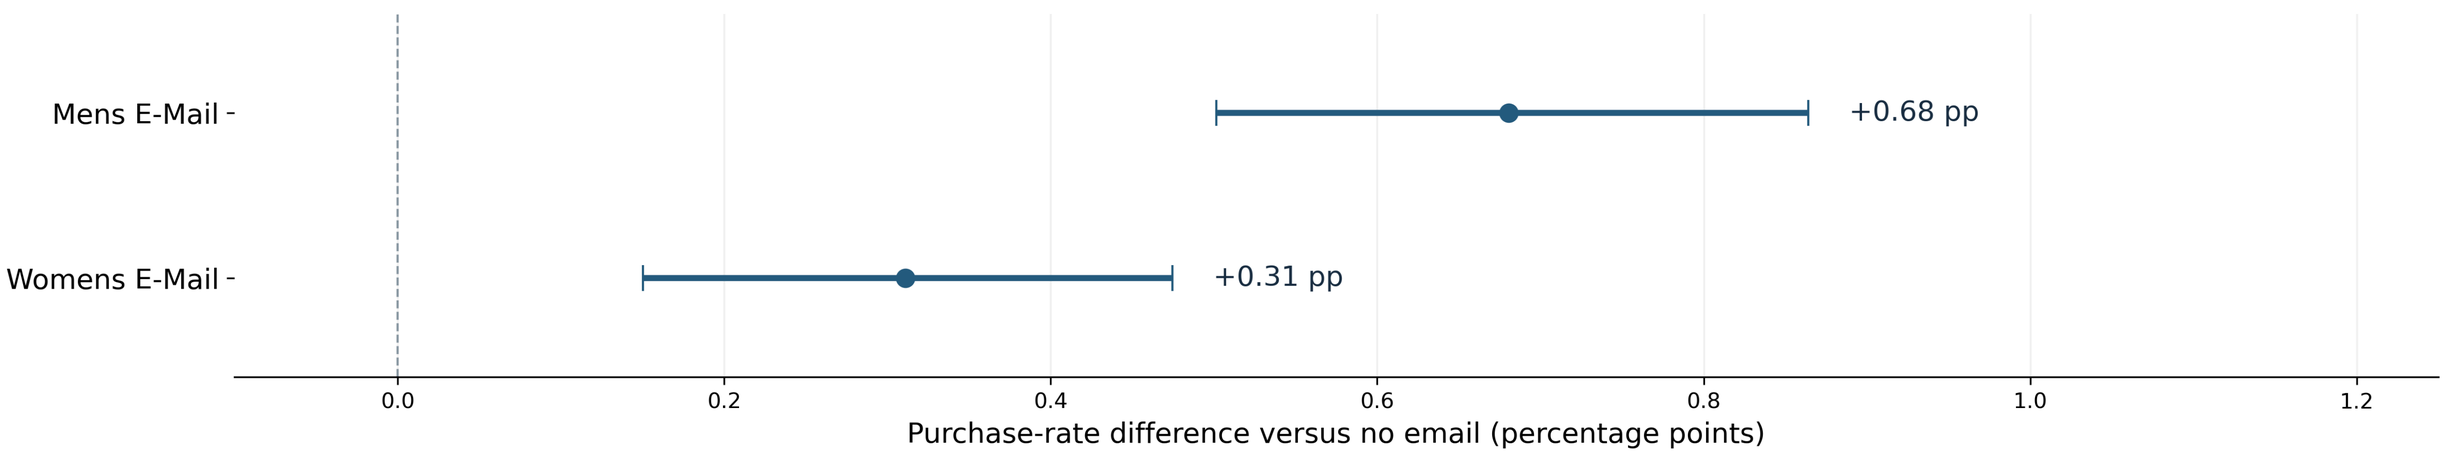

Purchase effects

Treatment	Purchase lift (pp)	95% CI low	95% CI high	Holm p-value
Mens E-Mail	0.68	0.50	0.86	<0.001
Womens E-Mail	0.31	0.15	0.47	<0.001

Exploratory spend effects

Treatment	Spend lift ($)	95% CI low ($)	95% CI high ($)
Mens E-Mail	$0.77	$0.50	$1.06
Womens E-Mail	$0.42	$0.17	$0.68

Purchase lift and 95% intervals

Marginal Newcombe intervals; the table reports Holm-adjusted p-values. Historical randomized experiment.
